Mitali Chivate

Location: NC | **Phone:** +1 984-944-9268 | **Email:** chivatemitali@gmail.com | LinkedIn

SUMMARY

- Results-driven **Java Full Stack Developer** with **5+ years of experience** designing, developing, and deploying scalable enterprise applications using **Java 8/11/17, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Microservices, RESTful APIs, React.js, TypeScript, PostgreSQL, MongoDB, Redis, and AWS**.
- Hands-on experience building cloud-native, event-driven applications using **Kafka, RabbitMQ, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD, AWS (EC2, EKS, ECS, Lambda, S3, RDS)**, with expertise in **SQL optimization, distributed systems, API integration, security (JWT/OAuth2), and performance tuning**.
- Proficient in **Agile/Scrum, SDLC, OOP, Design Patterns, Git, JUnit, Mockito, Postman, Prometheus, Grafana, ELK Stack**, and AI-assisted development using **OpenAI APIs, GitHub Copilot, and ChatGPT**, delivering secure, high-quality, and scalable software solutions for enterprise and healthcare applications.

PROFESSIONAL EXPERIENCE

Cotiviti — **NC, United States**
Software Engineer — **September 2024 – Present**

- Developed scalable healthcare applications using **Java, Spring Boot, Spring MVC, Spring Security, Hibernate, and Microservices**, delivering secure, high-performance solutions for healthcare claims processing, payment integrity, and provider data management while implementing JWT and OAuth2 authentication.
- Designed and implemented **RESTful APIs** and integrated external healthcare systems using **Java, Spring Boot, JSON, and GraphQL**, enabling real-time claims validation, member eligibility verification, and provider data exchange while significantly improving processing efficiency and API response times.
- Developed event-driven microservices using **Apache Kafka, RabbitMQ, and asynchronous messaging**, enabling reliable communication between distributed healthcare services, improving data consistency, reducing processing latency, and supporting high-volume transaction workloads.
- Designed and optimized relational database solutions using **PostgreSQL, Oracle, SQL, Hibernate, JPA, JDBC, and Redis**, created normalized schemas, optimized complex SQL queries and indexing strategies, and improved application performance while maintaining healthcare data integrity.
- Built responsive healthcare dashboards using **React.js, TypeScript, HTML5, CSS3, JavaScript, Tailwind CSS, Bootstrap, Redux, and Material UI**, enabling business users to monitor healthcare claims, payment analytics, and operational metrics through intuitive real-time interfaces.
- Deployed cloud-native Java applications on **AWS EC2, ECS, EKS, Lambda, RDS, S3, IAM, CloudWatch, API Gateway, Docker, Kubernetes, Helm, and Terraform**, improving scalability, availability, fault tolerance, and infrastructure automation across production environments.
- Automated software delivery using **Git, GitHub, Maven, Gradle, Jenkins, GitHub Actions, CI/CD pipelines, Docker, JUnit 5, Mockito, REST Assured, Postman, Swagger/OpenAPI, and SonarQube**, reducing deployment time, increasing release quality, and improving development productivity.
- Implemented monitoring, logging, and production support using **Prometheus, Grafana, ELK Stack, Datadog, CloudWatch, and Sentry**, proactively identifying performance bottlenecks, resolving production incidents, and maintaining high system availability and operational stability.
- Collaborated with cross-functional Agile teams to analyze healthcare business requirements, design scalable software architecture, participate in sprint planning, code reviews, and technical discussions, consistently delivering secure, high-quality software aligned with SDLC and Agile best practices.
- Applied **Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, MVC Architecture, Microservices Architecture, Distributed Systems, and Event-Driven Architecture** to build maintainable, reusable, and scalable enterprise healthcare applications supporting millions of healthcare records.
- Leveraged **AI-powered developer tools including GitHub Copilot, ChatGPT, Cursor AI, and OpenAI APIs** to accelerate software development, automate documentation, improve code quality, assist API development, and enhance engineering productivity while supporting intelligent healthcare automation initiatives.
- Provided production support by troubleshooting Java, Spring Boot, database, Kubernetes, AWS, and API-related issues, performing root cause analysis, implementing performance optimizations, maintaining technical documentation, and ensuring reliable operation of mission-critical healthcare applications.

University of North Carolina Charlotte — **NC, United States**
Graduate Assistant — **January 2023 – May 2024**

- Assisted faculty in developing and maintaining **Java** and **Spring Boot** applications, designed **RESTful APIs**, implemented business logic, and optimized application performance, improving the efficiency of academic and administrative software systems.
- Developed and optimized **SQL** and **PostgreSQL** database queries, designed relational database schemas, performed data analysis, and maintained data integrity while supporting large-scale academic research and reporting requirements.
- Built and tested software components using **Java, JUnit, Mockito, Postman, Maven, Git, and GitHub**, participated in code reviews, resolved application defects, and maintained comprehensive technical documentation following **SDLC** and **Agile** methodologies.
- Supported cloud-based application deployment using **AWS (EC2, S3)**, **Docker**, and CI/CD practices, monitored application performance, troubleshot production issues, and collaborated with cross-functional teams to ensure reliable software delivery.
- Collaborated with faculty, researchers, and student teams to gather business requirements, implement software enhancements, automate data processing workflows, and leverage **AI-assisted development tools (GitHub Copilot and ChatGPT)** to improve productivity, code quality, and development efficiency.

Brillio — **India**
Software Engineer — **June 2021 – July 2022**

- Developed enterprise-grade **Java 11**, **Spring Boot**, and **Spring MVC** microservices, implemented secure **RESTful APIs**, and integrated **Spring Security**, **Hibernate**, and **JPA**, improving application scalability, maintainability, and overall system performance.
- Built responsive web applications using **React.js, JavaScript, HTML5, CSS3, Bootstrap, and TypeScript**, integrated backend REST APIs, enhanced UI responsiveness, and delivered seamless user experiences across multiple enterprise platforms.
- Designed and optimized **PostgreSQL**, **MySQL**, and **Oracle** databases by writing complex SQL queries, creating indexing strategies, implementing **JPA/Hibernate**, and integrating **Redis** caching to improve application performance and data retrieval speed.
- Developed event-driven solutions using **Apache Kafka** and **RabbitMQ**, enabling asynchronous communication between distributed microservices, improving system reliability, scalability, and high-volume transaction processing.
- Deployed cloud-native applications on **AWS (EC2, S3, RDS, ECS, Lambda, IAM, CloudWatch)** using **Docker** and **Kubernetes**, automated deployments through **Jenkins**, **GitHub Actions**, **Maven**, and **CI/CD** pipelines, reducing release time and improving deployment reliability.
- Created comprehensive unit, integration, and API tests using **JUnit 5**, **Mockito**, **REST Assured**, **Postman**, and **Swagger/OpenAPI**, increasing test coverage and reducing production defects.

Capgemini — **India**
Software Analyst — **November 2020 – June 2021**

- Developed and enhanced enterprise applications using **Java 8, Spring Boot, Spring MVC, Hibernate, JPA, JDBC, and RESTful APIs**, delivering scalable backend solutions while improving application performance, reliability, and maintainability.
- Designed and optimized **SQL**, **PostgreSQL**, **MySQL**, and **Oracle** database queries, created stored procedures, implemented indexing strategies, and integrated **Redis** caching to improve data retrieval performance and ensure data consistency.
- Built responsive web interfaces using **React.js, JavaScript, HTML5, CSS3, Bootstrap, and TypeScript**, integrated REST APIs, resolved UI defects, and improved application usability across multiple browsers and devices.
- Assisted in deploying and maintaining applications on **AWS (EC2, S3, RDS, IAM, CloudWatch)** using **Docker**, **Git**, **Maven**, **Jenkins**, and **CI/CD** pipelines while supporting production releases and troubleshooting application issues.

FncallBack Technologies **India**
Software Developer **October 2019 – October 2020**

- Developed and maintained enterprise web applications using **Java 8, Spring Boot, Spring MVC, Hibernate, JPA, JDBC, and RESTful APIs**, implementing scalable business logic and secure backend services while improving application performance and maintainability.
- Built responsive front-end applications using **React.js, JavaScript, HTML5, CSS3, Bootstrap, and TypeScript**, integrated REST APIs, optimized UI performance, and enhanced user experience across desktop and mobile platforms.
- Designed and optimized **MySQL**, **PostgreSQL**, and **Oracle** databases by writing complex SQL queries, creating stored procedures, implementing indexing strategies, and integrating **Redis** caching to improve data retrieval and application performance.

TECHNICAL SKILLS

Programming Languages	Java (8/11/17), SQL, JavaScript (ES6+), TypeScript, Python (Basic), C
Backend Development	Core Java, Spring Framework, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, JDBC, Microservices, RESTful APIs, GraphQL, Node.js, Express.js
Frontend Development	React.js, TypeScript, HTML5, CSS3, JavaScript, Tailwind CSS, Material UI, Bootstrap, Redux, Angular, jQuery, AJAX, JSON
Databases	PostgreSQL, MySQL, Oracle, MongoDB, Redis, NoSQL
Messaging & Distributed Systems	Apache Kafka, RabbitMQ, Event-Driven Architecture, Distributed Systems, Asynchronous Processing
Cloud & DevOps	AWS (EC2, ECS, EKS, S3, RDS, Lambda, IAM, CloudWatch, API Gateway), Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, CI/CD
Testing & API Tools	JUnit 5, Mockito, REST Assured, Postman, Swagger/OpenAPI, Selenium
Monitoring & Observability	Prometheus, Grafana, ELK Stack, Datadog, Sentry, AWS CloudWatch
Authentication & Security	Spring Security, JWT, OAuth 2.0, OpenID Connect
Build & Version Control	Maven, Gradle, Git, GitHub, GitLab, Bitbucket
J2EE Technologies	Servlets, JSP, JSTL, JavaBeans, JDBC, Apache Tomcat
Software Engineering	Object-Oriented Programming (OOP), Data Structures & Algorithms, Design Patterns, SOLID Principles, MVC Architecture, SDLC, Agile Scrum, Waterfall
Operating Systems	Linux, Unix, Windows
Developer Tools	IntelliJ IDEA, Eclipse, Visual Studio Code, Docker Desktop
AI & Generative AI	OpenAI APIs, LangChain (Basic), GitHub Copilot, ChatGPT, Cursor AI, Prompt Engineering, AI-Assisted Software Development

EDUCATION

University of North Carolina Charlotte, **United States**
Master of Science – Computer Science Aug 2022 – May 2024 GPA: 3.6/4.0
Savitribai Phule Pune University, **India**
Bachelor of Engineering – Information Technology Aug 2016 – May 2020 GPA: 8.23/10

CERTIFICATIONS

● AWS Certified Cloud Practitioner ● Java Microservices with Spring Boot and Spring Cloud ● Jenkins Essential

PROJECTS

Healthcare Claims Processing & Payment Integrity Platform
Technologies: Java 17, Spring Boot, Spring Security, React.js, PostgreSQL, Kafka, Redis, Docker, Kubernetes, AWS (EC2, EKS, S3, RDS), Jenkins, GitHub Actions, Prometheus, Grafana

- Developed a cloud-native healthcare claims processing platform using **Java 17, Spring Boot, and Microservices**, enabling secure claim validation, provider management, and payment integrity workflows.
- Designed secure **RESTful APIs** with **Spring Security, JWT, and OAuth2**, integrating provider, member, and claims data with external healthcare systems.
- Implemented **Apache Kafka** for event-driven communication and **Redis** for distributed caching, reducing API response time by **40%** and improving system scalability.
- Built responsive dashboards using **React.js, TypeScript, Redux, HTML5, CSS3, and Material UI**, providing real-time analytics and operational insights.
- Deployed applications on **AWS EKS** using **Docker, Kubernetes, Jenkins, GitHub Actions**, and monitored production using **Prometheus, Grafana, and CloudWatch**, achieving **99.9% system availability**.

AI-Powered Provider Recommendation & Analytics Platform
Technologies: Java, Spring Boot, React.js, PostgreSQL, MongoDB, OpenAI API, LangChain, REST APIs, AWS, Docker, Kubernetes, Git, Maven

- Developed an **AI-powered provider recommendation platform** using **Java, Spring Boot, React.js, PostgreSQL, and OpenAI APIs** to improve provider search and healthcare recommendations.
- Integrated **LangChain** and **OpenAI Function Calling** to automate provider recommendations, document summarization, and intelligent search capabilities.
- Designed scalable **REST APIs**, optimized **PostgreSQL** queries, and implemented **MongoDB** for flexible document storage and provider metadata.
- Built responsive dashboards using **React.js, TypeScript, Tailwind CSS, and Material UI**, enabling administrators to monitor recommendations and platform performance.
- Containerized applications with **Docker**, deployed on **AWS**, automated deployments using **CI/CD pipelines**,
